

Important Notice for LINKS 386 Owners

During the production of Pebble Beach,[®] a design change to the main LINKS 386 executable was required. The change increases the distance from the viewer that terrain is drawn and was needed to allow the player to "see farther." This makes the view from the ocean side holes more realistic and closer to what the player would see if they were actually playing the course.

Drawing time for each scene is increased slightly, but should not be a problem for most machines. Owners of slower machines will experience greater delays. ***If you do not want the change to be installed do not update your LINKS 386 version.***

It is also recommended that you set your drawing detail settings to MAX-MED-MED for optimum graphic appearance. This will also cause a slight increase in drawing time. Detail settings can be changed by selecting "GAME" from the main menu and then selecting "Change Game Settings."

Thanks for buying Pebble Beach,[®]

The LINKS 386 Design Team
